# Zambia 2008 District Profile for Senanga

# ANALYSIS

### Issue #1: Progress in primary school enrolment in Senanga

What is observed and why is it happening?

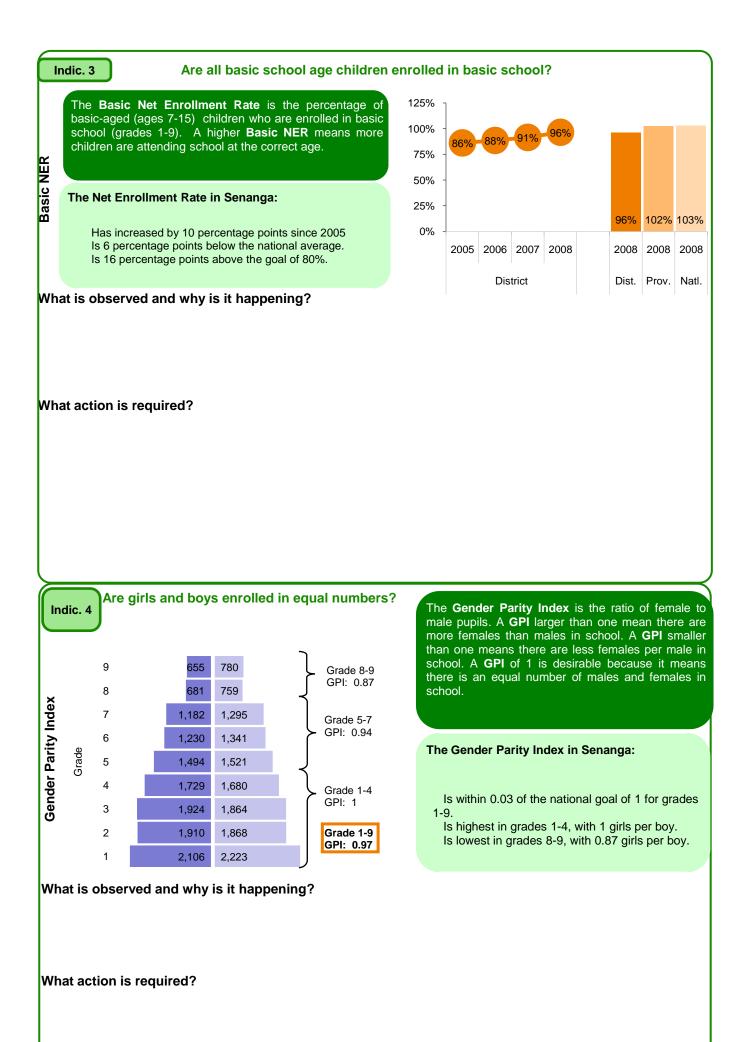

# Are children entering basic school on time?

The **Net Intake Rate** is the percentage of seven-year olds who enter school for the first time. It gives us an idea of how many 7-year olds are entering school and how many are not. A higher **NIR** means more seven year olds are entering school on time.

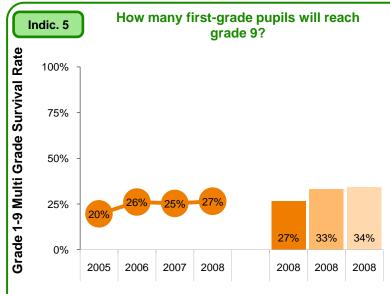

# The Net Intake Rate in Senanga:

Has increased by 19 percentage points since 2005 Is 20 percentage points above the national value. Is 6 percentage points below the goal of 80%.

Indic. 2 Of all the children who enter school for the first time, how many are the correct age?							
	100%					Since 2005 in Senanga:	
Relative age of school entrants	75% -	55%	54%	50%	47%	% overage	Overage entrants have decreased by 8 percentage points. Properly aged entrants have increased by 9 percentage points. Underage entrants have decreased by 1 percentage points.
	50%						
	25% -	42%	41%	45%	51%	% ontime	What is observed and why is it happening?
Relati	0%	4%	5%	5%	3%	% underage	
		2005	2006	2007	2008		
wi en me the pe pu	This graph shows the <b>percentage of new school entrants</b> who are on-time (age 7), overage (older than 7) and underage (younger than 7). A high percentage of overage entrants means a lower NIR, but is acceptable because it means that older children are receiving an education. Once all the older children have been cycled through school, the percentage of overage entrants should decrease and the percentage of on time entrants should increase. If underage pupils are entering in large percentages, they are taking spaces from older pupils.						What action is required?

# ISSUE #2: Efficiency in Senanga

What is observed and why is it happening?

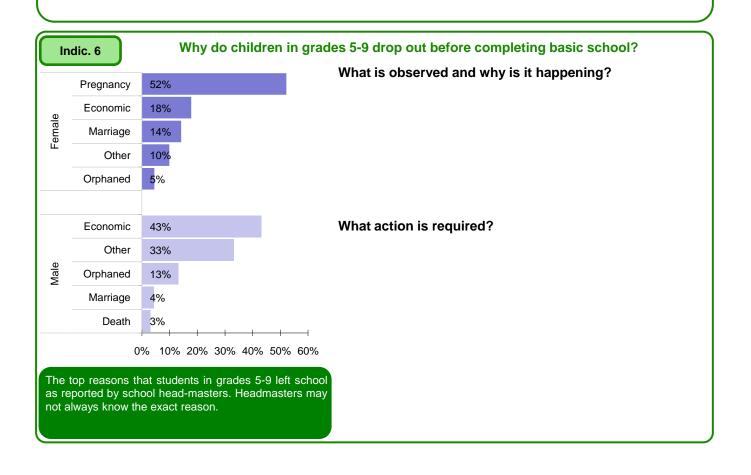

The **Grade 1-9 Multi Grade Survival Rate** is the percentage of pupils enrolled in grade 1 during the current school year who are expected to reach grade 9, no matter how many years It is estimated using data from a single year. A higher survival rate means more pupils are expected to reach grade 9 and less drop out.

The Grade 1-9 Multi Grade Survival Rate in Senanga:

Has increased by 7 percentage points since 2005

Is 8 percentage points below the national average.

Is  $5\overline{3}$  percentage points below the goal of 80%.

#### Are some Grade 1 students less likely than others to reach higher grades of Basic School?

Indic. 7

Grade 5

Grade 4

Grade 3

Grade 2

Grade 1

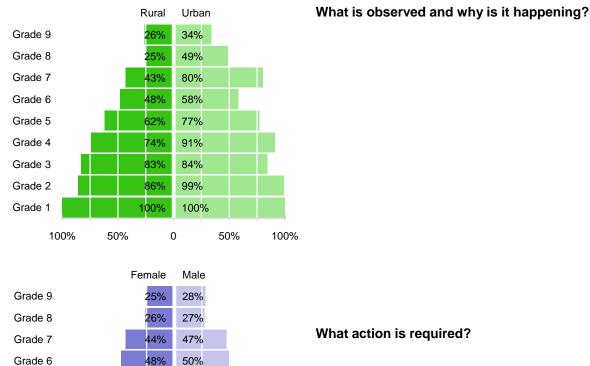

These pyramids compare the multi-grade survival rates for a grade 1 pupil from different education situations. When one group has a lower survival rate to a particular grade, pupils from that group are less likely to reach that grade.

#### In Senanga, students are less likely to stay in school through grade 9 if they are female or if they attend a rural or community school.

26% of rural school entrants will reach grade 9 as compared with 34% of urban entrants.

25% of female school entrants will reach grade 9 as compared with 28% of male entrants.

0% of community school entrants will reach grade 9 as compared with 33% of government school entrants.

# ISSUE #3: Are children learning?

The **Grade 7 Exam** is designed to measure individual students' learning levels at the end of grade 7. Exams are a common measure of learning, though critics argue that students with a high knowledge level could perform poorly if they are not good at taking tests.

Exam scores are tabulated according to wher the test is taken rather than where a pupil attends school. For example, if a community school pupil travels to a government school to take the exam, then their score is recorded as a government school score. Because of this, the Urb./Rur and Comm./Govt. scores i n the graph may not reflect learning levels properly.

Not all grade 7 pupils sit for the exam, which means that exam scores may not be representative of the learning level of all grade 7 pupils. If high achieving pupils take the exam and low achieving pupils avoid it, then the average scores represent the learning level of high achievers more than that of low achievers. The average Grade 7 exam score in Senanga :

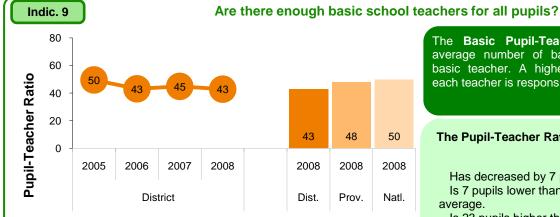

Is 21 points higher than the national average.

Is 22 points higher in rural schools than in urban schools.

Is 15 points longer in community schools than in government schools.

What is observed and why is it happening?

### Issue #4: How are school resources distributed in Senanga ?

The Basic Pupil-Teacher Ratio is the average number of basic pupils to each basic teacher. A higher PTR means that each teacher is responsible for more pupils.

#### The Pupil-Teacher Ratio in Senanga:

Has decreased by 7 pupils since 2005. Is 7 pupils lower than the national

Is 23 pupils higher than the national goal

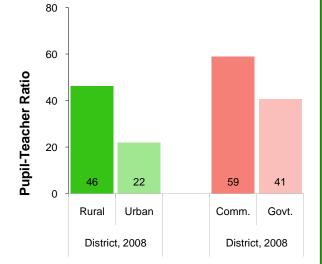

What is observed and why is it happening?

What action is required?

Indic. 10

How are basic school teachers distributed by school type?

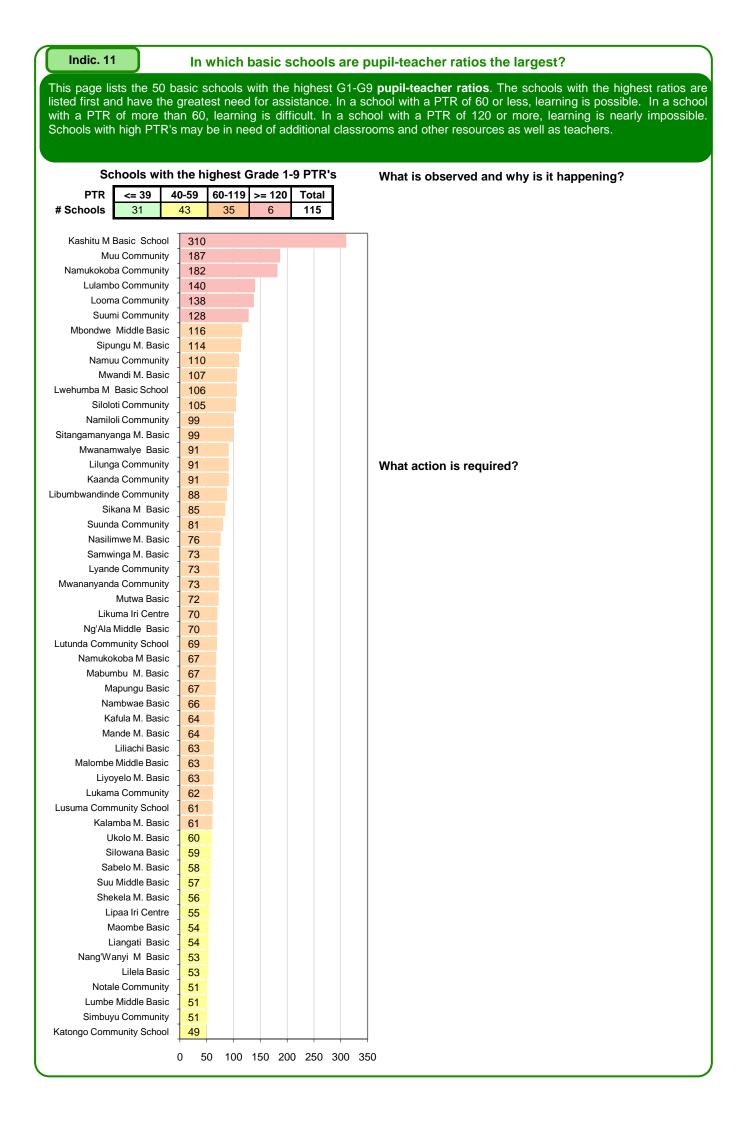

What is observed and why is it happening?

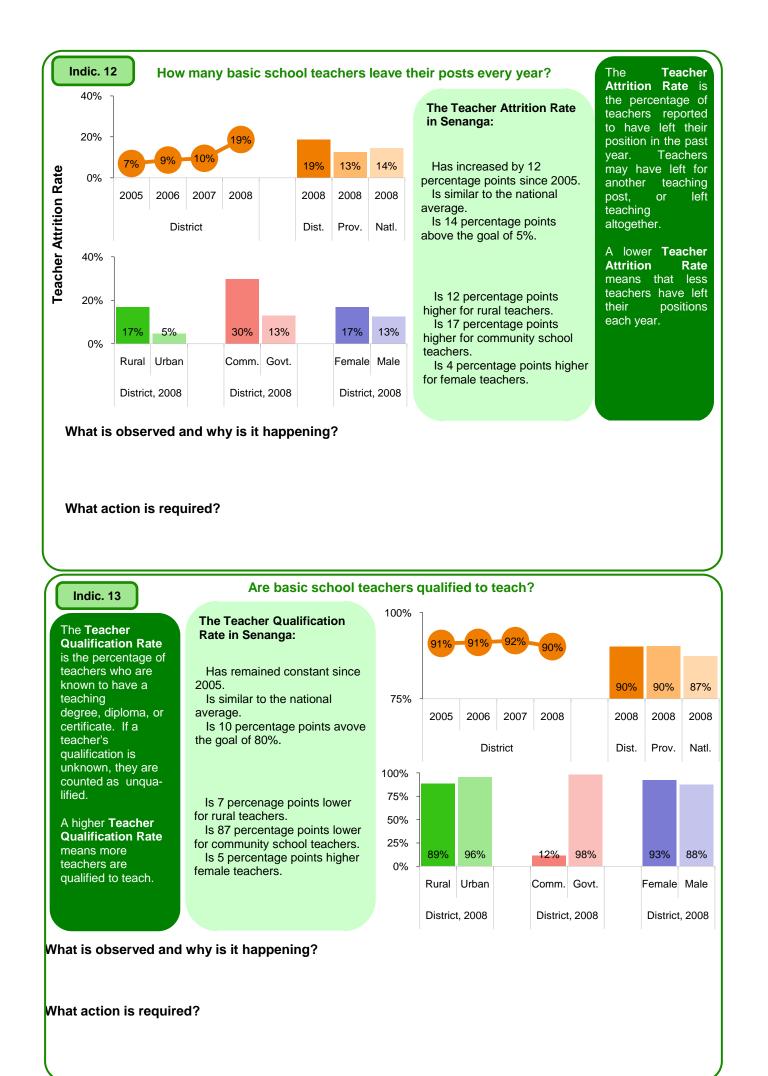

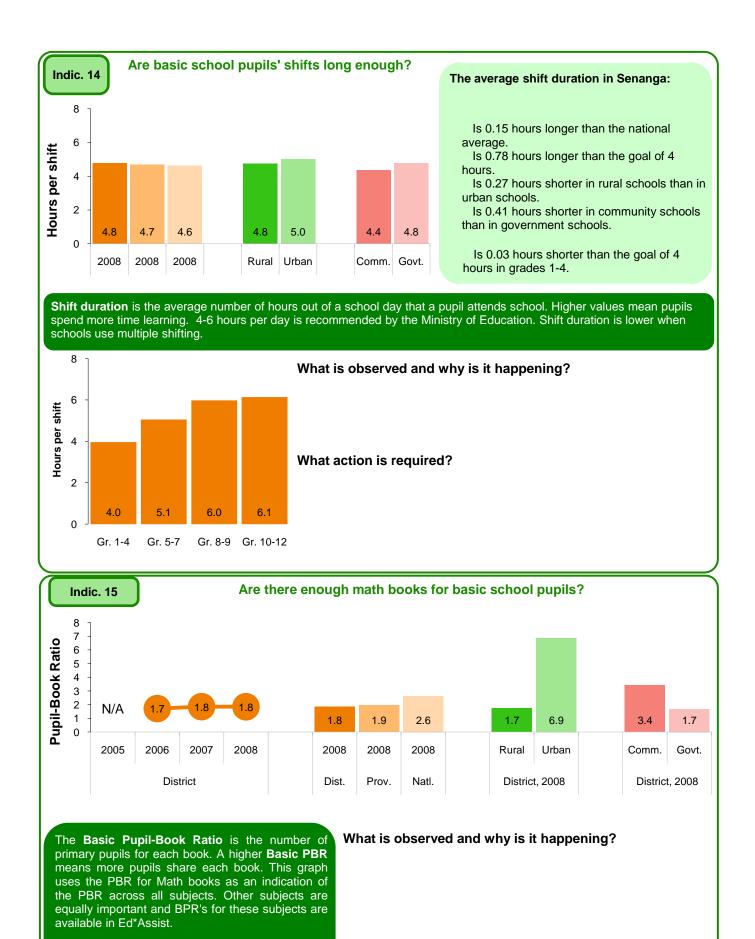

# **Basic Pupil-Teacher Ratio by** School Type:

PTR in rural schools is 24 pupils higher than PTR in urban schools.

PTR in community schools is 18 pupils higher than PTR in government schools.

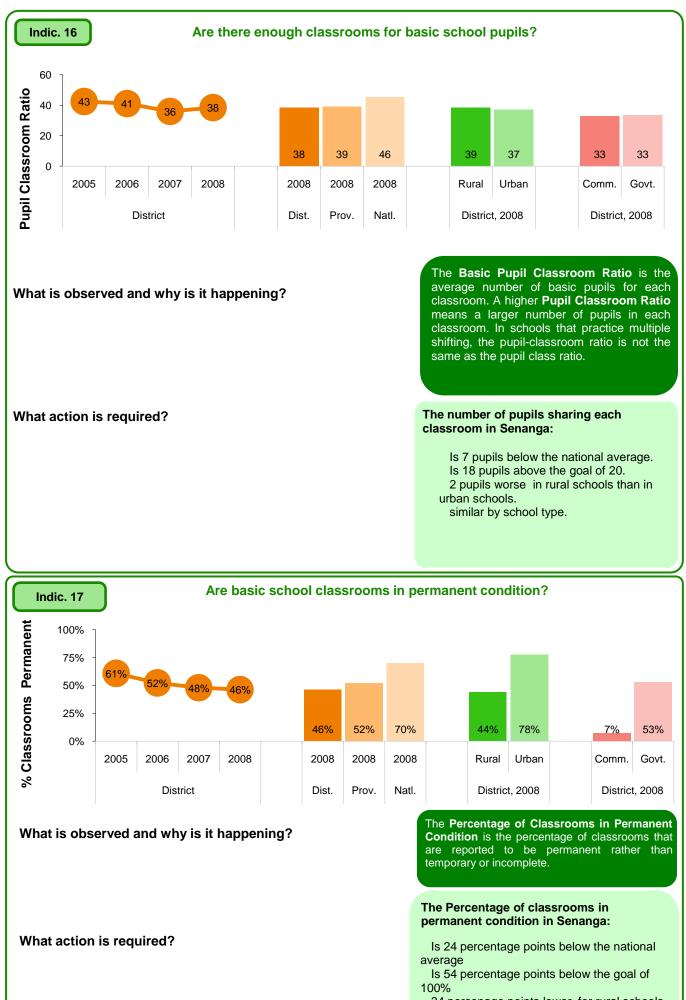

What action is required?

#### The pupil book ratio in Senanga:

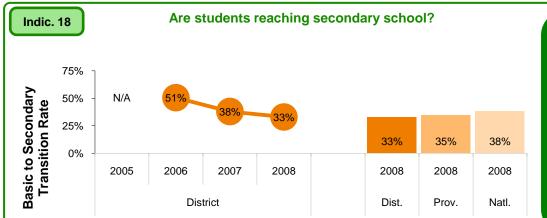

Is 0.8 pupils lower than the national average. Is 0.8 pupils higher than the goal of 1.

- Is 5.1 pupils lower in rural schools.
- is 2 pupils higher in community schools.

34 percenage points lower for rural schools. 46 percentage points lower for community

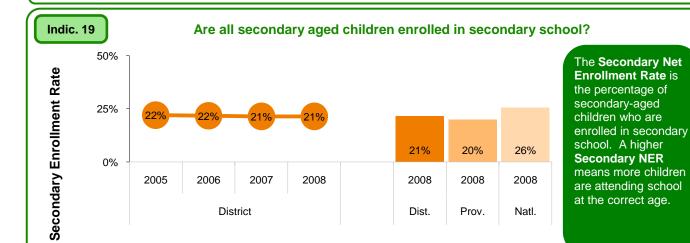

The Basic to Secondary Transition Rate is the percentage of students in the last grade of basic school (grade 9) who reach the first grade of secondary (grade 10). A higher means more rate pupils are being promoted to secondary.

What is observed and why is it happening?

What action is required?
