## The Structure of the Education System in Namibia

Namibia has a 7-3-2 formal education structure. Primary school has an official entry age of six and a duration of seven grades. Primary is broken into two phases: lower primary (grades 1-4) and upper primary (grades 5-7). Secondary school is divided into two cycles: lower secondary (junior secondary) consists of grades 8-10 and upper secondary (senior secondary) consists of grades 11 12. In principle, public school is free. School attendance is compulsory through the end of primary or until age 16, whichever comes first. Students sit for the national standardized assessment at the end of grade 5, the Junior Secondary Certificate assessment (JSC) at the end of grade 10, and the Namibia Senior Secondary Certificate examination (NSSCO) at the end of grade 12. (UNESCO IBE, World Data on Education. 7th Edition, 2010-2011. Revised 8/2010).

## Out of School Children by Individual and Household Characteristics

- Fewer girls $(6 \%$ or 12,553$)$ are out of school than boys ( $8 \%$ or 16,852 ) in Namibia.
- Out of school rates for children from rural areas (8\%) are higher than those for children from urban areas (5\%). In terms of absolute numbers, there are more children out of school in rural areas $(22,744)$ than in urban areas $(6,661)$.
- Out of school rates are highest for children in the poorest wealth quintile (11\%).

Parity indices provide information about the greatest sources of inequality in a population. The graph at left provides ratios of different estimates of children aged 7-14 who are out of school. It shows, for example, that the out of school rate in rural areas is 1.8 times higher than that in urban areas.

- For Namibia, the greatest disparity in out of school rates is between children from provinces with the highest and lowest school participation rates. Children from the worst performing province are 31.1 times as likely to be out of school as children from the best.

## About Data Sources

All out of school estimates presented in this profile are EPDC extractions of Demographic and Health Survey (DHS) data. DHS Surveys are conducted every several years and collect information on health, education, and other topics for households and individuals residing in those households. The 2007 Namibia DHS Survey is representative at the national and subnational level. For more information, please see http://www.measuredhs.com/.

Estimates of out of school children from household surveys can be expected to differ from administrative estimates, such as those from the UNESCO Institute for Statistics and national government agencies, because of differences between these sources in data collection and estimation methods for measuring school participation. For more information on the differences between these data sources, please see www.epdc.org.
the science of improving lives

## Out of School Children by Subnational Regions

- The subnational region with the highest percentage of children out of school is Kunene (44\%). Khomas has the lowest rate of school non-participation (1\%).
- The highest numbers of out of school children are located in Kavango $(6,266)$. Karas has the lowest numbers of out of school children (403).

Rates of Out of School Children by Subnational Region (\%), with 95\% Confidence Intervals, DHS 2007

Numbers of Out of School Children by Subnational Region (\# in thousands), with 95\% Confidence Intervals, DHS 2007

## Why Ages 7-14?

EPDC presents data for ages 7-14. This age group captures the bulk of basic compulsory education in most countries, aids crossnational comparability of estimates, and conveys the normative international frameworks set by the Convention on the Rights of the Child and supported by the ILO Minimum Age Convention.

## Out of School Rates by Age and Sex

- The official primary school entry age in Namibia is age 7. At that age, $9 \%$ of girls and $9 \%$ of boys are out of school.
- At age $15,13 \%$ of girls and $20 \%$ of boys are out of school.
- School participation is highest tor girls at age 11 and tor boys at age 11.

## Out of School Rates, by Age and Sex

## Summary of EPDC Methodology on Measuring Out of School Children

In this profile, EPDC presents estimates of the proportion and number of out of school children of the population ages 7-14 using household survey data. Along with relative and absolute estimates of out of school children, EPDC provides $95 \%$ confidence intervals for each estimate.

To create estimates of the proportion of out of school children for a particular school year, EPDC used birthdate information to identify children who were of a particular age range (7-14) on the month that the school year began. Children who had attended primary school or higher at any time during the school year were classified as 'in school;' Children who had not attended school at any time during the school year, or who had attended pre-school during that reference period were classified as 'out of school.' The proportion of children who are out of school is calculated as the number of children within the 7-14 age range who were classified as out of school divided by the number of children within the same age range.

To obtain the number of out of school children, the out-of-school rate is then applied to the estimated population of the same age range from the UN Population Division (EPDC obtained single-age population estimates to build the correct age range). UN Population Division figures are provided for mid-year each year, and EPDC uses the population figures from the year closest to the start of the school year in each country. Depending on a country's main academic calendar, the population figure may be from the year before the school participation year.

For more information on measurement of out of school children, please see the EPDC website at www.epdc.org.

EPDC Estimated Rates and Numbers of Out of School Children based on DHS 2007 Presented with 95\% Confidence Intervals
