# Basic Education Profile for North-Central Nigeria 

Benue, F.C.T., Kogi, Kwara, Nasarawa, Niger, and Plateau States

## BASIC EDUCATION OVERVIEW

This overview provides information on basic education in NorthCentral Nigeria, with indicators on attendance at three school levels, primary school completion, and literacy rates. Of schoolage children (ages 6-16) 33 percent are Muslims; I 3 percent of these go to only Qur'anic school, which does not provide formal
subject teaching. The region's performance is better than the national average on primary net attendance and literacy, but poorer on primary completion and junior secondary school (JSS) net attendance. The gender disparity in the North-Central is slightly less severe than it is nationally.

Source: EPDC extraction from DHS 2003 dataset

1. Pre-primary attendance is the percentage of children aged 6-11 who reported having entered school and who had attended pre-primary.
2. Primary completion rate is the number of children in the last year of primary school as a percentage of the population of 11 -year-olds.
3. Literacy rate is the percentage of children aged $I I-I 2$ who can read a partial or whole sentence.

## LEARNING PYRAMID:ACHIEVEMENT AND LOSSES IN PRIMARY SCHOOL

The learning pyramid shows the proportion of 6-year-olds likely to attend and complete primary school and to be able to read a simple sentence by 12 years of age. There is gender disparity on completion of primary education (female 73 percent, male 89 percent) and more students will complete primary education in

urban areas (9| percent) than rural ones ( 79 percent). Despite relatively high school entrance rates, many students are still illiterate by age 12 (male 48 percent, female 52 percent, rural 45 percent). Programs to improve quality are needed to raise literacy and completion rates.

## SCHOOL ATTENDANCE STATUS

## Primary School-Age Children

By age 6, most children in this region have entered school. Very few drop out before age II. Wealth is a clear determinant of school attendance: the never-attended and dropout rates for 6- to I I-year-olds in the poorest 40 percent of the population are $2-3$ times as high as for children in wealthier households.

Source: EPDC extraction from DHS 2003 survey dataset Note: Data on attendance are based on formal education figures.

## FACTORS AFFECTING NONATTENDANCE AND DROPOUT

The most important reasons for never having attended school in the region are costs, being considered too young, and illness/ disability. Two of the strongest reasons for dropout-both higher
than the national average-are costs of education and lack of interest in schooling.

## EFFICIENCY: REPETITION AND DROPOUT RATES IN PRIMARY SCHOOL BY GRADE

Repetition rates are overall slightly lower in this region than nationwide, and dropout rates are low in grades I-5. However, an alarmingly high percentage of children leave school at the end of
primary school- 25 percent, compared to the national average of 17 percent. It may be that children fail the end-of-primary school exam and leave school instead of repeating grade 6.

## STUDENT BACKGROUND AND SCHOOL CHARACTERISTICS

Fathers (60 percent) have the most significant role in making decisions on children's education in the region. The majority of students in this region attend government schools ( 86 percent); these students come from all economic levels, fairly evenly distributed,
whereas students in private schools largely come from the middle to highest wealth quintiles. Less than $1 \%$ of the children attend private nonreligious schools.

PARENTAL CONTRIBUTION AND INVOLVEMENT IN MONEY AND TIME

North-Central parents spend about 5,194 Naira annually for each child in primary school-less than the national average of 7,918Naira. Much of this goes for transportation (49 percent) and food (20 percent). Of parents with one or more children in primary school, 91 percent report that they have visited the

## CHILD WELFARE

The portion of children who live with neither parent (12 percent) is above the national norm. Moderate or severe stunting, a symptom of poor nutrition, affects 22 percent of children, and 12 percent are underweight, both below the national average. Illiteracy
school at least once, and 90 percent have attended PTA meetings in the past 12 months; both of these rates are fairly high. Parents' attendance at meetings with teachers ( 78 percent) and school events ( 66 percent) is also above national averages.

## Time

Percentage of parents taking time for various
school-related activities school-related activities

Source: DHS EdData Survey 2004

## PERCEIVED SCHOOL QUALITY

Overcrowded classrooms and poor building quality are seen as problems by many parents in the North-Central region, whereas
relatively few- 15 percent and 14 percent, respectively-are concerned about school performance and pupil safety.

Reasons Primary Schools Shouldn't Provide Reproductive Education

## VALUE OF SCHOOLING

Acquiring literacy is seen as one of the main values of primary schooling for 15 -year-old children. For girls, another major perceived benefit is stronger morals and values, as well as better

## North-Central Nigeria

This education profile is intended to give a basic overview of the education sector in North-Central Nigeria. The data are from the 2004 Nigeria Demographic and Health Survey (DHS) EdData Survey, and are linked to the 2003 Nigeria DHS. The profile highlights issues related to attendance, retention, learning, and teaching efficiency. It also provides information on parents' contributions to their children's schooling (in money and time) and their perceptions of schooling. One section focuses on overall welfare of children in the region.

Note: The survey question on nonattendance was asked of about I,665 youth ages 6-16 who had not attended school for any reasons other than physical or mental disabilities. The survey question on dropout was asked of about 306 children ages 4-16 who had dropped out for any reasons other than physical or mental disabilities or long-term illness.

## DATA INSIGHTS

The North-Central region is made up of the states of Benue, Kogi, Kwara, Nasarawa, Niger, and Plateau. The Federal Capital Territory (F.C.T.) is also within this region.

- Pre-primary net attendance in NorthCentral is about average for Nigeria, but only about 30 percent of 3 - to 5 -yearolds are attending pre-primary. This region is still far from achieving universal basic education, as primary completion rates and junior secondary school attendance are lower than the national average.
- The reasons given for children never having attended school are cost, illness or disability, and lack of interest. Many dropouts cite lack of money and interest as the two main factors affecting their decision. Lack of interest in school appears much more widespread than average, which means that schools must try hard to make themselves relevant to the community, even though parents value schooling
- When children do enter school, they tend to stay until the end of primary. Many, however, do not make the transition to junior secondary, as the primary 6 dropout rate is high.
- Another area of critical importance is improving the quality of learning in primary school. The percentage of II- to | 2 -year-olds who could not read was high, especially among girls and children residing in rural areas.
- This region would also benefit from adult literacy programs, as half of all female parents/guardians could not read or write.
- In this region, friends and health centers are cited as main sources for reproductive education; parents and teachers are used less frequently than nationally. Most parents believe their primary-school children are too young for such instruction and 40 percent (vs. 29 percent nationally) feel it can encourage their children to have sex.
