# Basic Education Profile for Northeast Nigeria 

Adamawa, Bauchi, Borno, Gombe, Taraba, and Yobe States

## BASIC EDUCATION OVERVIEW

This overview provides information on basic education in Northeast Nigeria, with indicators on attendance at three school levels, primary school completion rates, and literacy rates. The majority of the population in this area is Muslim ( 87 percent); 35 percent of Muslim children go to only Qur'anic schools and are not
taught the formal curriculum. The Northeast region rates among the lowest on almost all the formal education indicators. Its rates of attendance, from pre-primary school to junior secondary school (JSS), are very low; female primary completion and literacy rates are also much lower than the national average.

Source: EPDC extraction from DHS 2003 dataset
I. Pre-primary attendance is the percentage of children aged 6-1I who reported having entered school and who had attended pre-primary.
2. Primary completion rate is the number of children in the last year of primary school as a percentage of the population of 11 -year-olds.
3. Literacy rate is the percentage of children aged $I I-12$ who can read a partial or whole sentence

## LEARNING PYRAMID:ACHIEVEMENT AND LOSSES IN PRIMARY SCHOOL

The learning pyramid shows the proportion of 6 -year-olds who are likely to attend and complete primary school and be able to read a simple sentence by the time they are 12 years of age. Only about 50 percent of females and 55 percent of 6 -year-olds in

rural areas will enter school. Those who enter will tend to stay in school, but many of them will still lack basic reading skills by the age of I2. Programs targeted at increasing access, promoting school attendance, and improving quality are needed in this region.

## SCHOOL ATTENDANCE STATUS

## Primary School-Age Children

The issue of low school attendance in the Northeast region is clearly reflected in the graph below. A large portion of children in each age group between age 6 and II has never attended school, and dropout rates increase slightly as age goes up. Moreover, children from poorer households are much more likely to have never attended school than children from wealthier households.

By Family's Socioeconomic Status
$\square$ Currently attending $\quad \square$ Stopped attending $\quad \square$ Never attended

## Secondary School-Age Children

Secondary school attendance is fairly low (40-60 percent) for children 12-16-the official secondary school ages; many are still in primary school. Only 29 percent of children from the poorest households attend either primary or secondary school, but 92 percent of those from the wealthiest homes do. Interventions should promote attendance at the proper age and address high dropout rates.

By Family's Socioeconomic Status
$\square$ Attending secondary $\quad \square$ Attending primary
$\square$ Stopped attending $\quad \square$ Never attended

Source: EPDC extraction from DHS 2003 survey dataset Note: Data on attendance are based on formal education figures.

## FACTORS AFFECTING NONATTENDANCE AND DROPOUT

Cost factors—both direct costs and opportunity costs in terms of lost labor-are major barriers to school attendance and retention in the Northeast, as they are nationally. Also important in the

Nonattendance (Age 6-16)

case of children who have never attended school are the distance to the school and attendance at Qur'anic schools, whereas the dropout rate is strongly affected by the poor quality of education.

## EFFICIENCY: REPETITION AND DROPOUT RATES IN PRIMARY SCHOOL BY GRADE

Dropout rates are relatively low in the early grades of primary school. However, dropout rises to $14 \%$ at the end of primary schooling, even though lower secondary is compulsory. Repetition rates are below the national average for primary school grades,
except for grade 6, relatively higher than the national average at 4\%. It is possible that children who do not pass the end-of-primary school exams either attempt to resit the exams the following year or leave school.

## STUDENT BACKGROUND AND SCHOOL CHARACTERISTICS

Fathers are the most likely (68 percent) to lead in making decisions about children's education in the region. Most students (93 percent) attend government schools. The two types of private schools cater to different populations: while the majority of children
in religious private schools (6I percent) come from the wealthier households, nonreligious private schools are largely attended by children from poorer homes ( 95 percent).

[^0]PARENTAL CONTRIBUTION AND INVOLVEMENT IN MONEY AND TIME

Parents in the Northeast region spend about 3,869 Naira per student annually on primary school education, well below the national average of 7,918 Naira. The bulk of the money is spent on extra lessons (38 percent), furniture (19 percent), food (16 percent) and tuition ( 15 percent). In addition, 77 percent of

## CHILD WELFARE

In the Northeast, 74 percent of children live with both parents, slightly higher than the national average. However, 35 percent of children are stunted (a symptom of poor nutrition) or wasted, and 21 percent are underweight. The illiteracy rate among female

Northeast region parents with one or more children in primary school report that they have visited the school at least once: 83 percent have attended PTA meetings and 73 percent have attended teacher meetings in the past 12 months. However, they are slightly less likely to attend school events than parents nationally.

## Time

Percentage of parents taking time for various school-related activities

Source: DHS EdData Survey 2004

Source: DHS EdData Survey 2004

## PERCEIVED SCHOOL QUALITY

Overcrowded classrooms and poor building quality are big concerns of parents. Relatively few parents cited teacher performance
as an issue, and even fewer expressed concerns about the safety of their children at school.

## VALUE OF SCHOOLING

This graph shows what parents and guardians see as the specific benefits of completing primary school for 15-year-old children. Acquiring literacy is seen as one of the main values, along with gaining

morals/values and social skills. A substantial minority believe primary schooling is also important for giving female students better skills in marriage and hygiene.

## Northeast Nigeria

This education profile is intended to give a basic overview of the education sector in Northeast Nigeria. The data are from the 2004 Nigeria Demographic and Health Survey (DHS) EdData Survey, and are linked to the 2003 Nigeria DHS. The profile highlights issues related to attendance, retention, learning, and teaching efficiency. It also provides information on parents' contributions to their children's schooling (in money and time) and their perceptions of schooling. One section focuses on overall welfare of children.

Note: The survey question on nonattendance was asked of about 1,665 youth ages $6-16$ who had not attended school for any reasons other than physical or mental disabilities. The survey question on dropout was asked of about 306 children ages 4-16 who had dropped out for any reasons other than physical or mental disabilities or long-term illness.

## DATA INSIGHTS

The Northeast region of Nigeria is made up of six states: Adamawa, Bauchi, Borno, Gombe,Taraba, and Yobe. Its estimated population was 16,870,70I in 2003 (medium variant projection), about 13.4 percent of the national population.

- The region's performance on education is worse than the national average for many indicators. Considerable effort is needed to get school-age children to school and to provide quality education.
- The incidence of illiteracy is high among mothers and children. This area would benefit from community programs that provide adult literacy classes and early childhood centers that provide education and nutritional supplements for young children. Investing in mothers' education in literacy and nutrition will improve children's well-being, and the children will be more likely to succeed in school. Many children who are not in school are enrolled in Qur'anic schools, and creative ways can be found to provide literacy courses or primary education in these institutions as well.
- Even though parents value schooling, many children are not in school. The reasons for nonattendance are varied, but costs (both direct and opportunity) are an important factor. Strategies to reduce the cost of schooling, such as providing scholarships, building schools within villages or communities, flexible school schedules, and providing school lunches, would be major steps toward improving school attendance in this area. Providing opportunities to teach the core curriculum in Qur'anic schools and other less formal institutions would be important, as the majority of schoolage children in this region are Muslims, and a large portion of them attend only Qur'anic schools.
- In the Northeast, parents and teachers are the main sources of reproductive education, with parents taking a stronger role in this region than nationally. A large portion of parents believes that their children in primary school are too young for reproductive education and that such instruction can encourage children to have sex.
