# Basic Education Profile for Southeast Nigeria 

Abia, Anambra, Ebonyi, Enugu, and Imo States

## BASIC EDUCATION OVERVIEW

This overview provides information on basic education, with indicators on attendance at three school levels, primary school completion and literacy rates. On all indicators except for primary completion, performance in the Southeast is much higher than
the national average; this is especially true for pre-primary net attendance. The Southeast does not show a large gender disparity in learning achievement, and female students actually outperform males in primary and junior secondary school (JSS) net attendance.

Source: EPDC extraction from DHS 2003 dataset

1. Pre-primary attendance is the percentage of children aged 6-11 who reported having entered school and who had attended pre-primary.
2. Primary completion rate is the number of children in the last year of primary school as a percentage of the population of II -year-olds.
3. Literacy rate is the percentage of children aged $I I-I 2$ who can read a partial or whole sentence.

## LEARNING PYRAMID:ACHIEVEMENT AND LOSSES IN PRIMARY SCHOOL

The learning pyramid shows the proportion of 6-year-olds likely to attend primary school, complete it, and be able to read a simple sentence by the time they are 12 years old. In the Southeast, 100 percent of all children (male and female) are reported as attending primary school, and 85 percent, on average, continue to grade 5.

Females and rural children have higher primary survival rates at 89 percent, compared to males and urban children at 81 percent. But since over a third of this population will remain illiterate, the region would benefit from literacy programs.

## SCHOOL ATTENDANCE STATUS

## Primary School-Age Children

By age 6, most children (93 percent) in Southeast Nigeria have entered school, with a slight rise in school attendance from age 6 to age II.The never-attended and dropout rates of 6 - to I I-year-olds in the poorest 40 percent of the population are higher than those of children in wealthier households.

## Secondary School-Age Children

Attendance is high for children ages 12-16 (the official secondary school ages), but an alarmingly large portion of students between ages 12 and 14 are still attending primary school. Children from richer households are more likely to be placed in age-appropriate grades in this older age group.

Source: EPDC extraction from DHS 2003 survey dataset Note: Data on attendance are based on formal education figures.

## FACTORS AFFECTING NONATTENDANCE AND DROPOUT

The main reasons given for school-age children in this region never to have gone to school were that they were too young,
their school was too distant, or the way to school was too risky to travel. Data on dropout were missing for this region.

## EFFICIENCY: REPETITION AND DROPOUT RATES IN PRIMARY SCHOOL BY GRADE

Repetition rates in the Southeast are comparable to the national average, except for the first grade at I percent, which is well below the national average of 4 percent, and for the second grade at 7
percent, substantially higher than the national average of 2 percent. Dropout rates are low for grades I-5 and remain fairly low at 4 percent in grade 6, compared to the national average of 17 percent.

## STUDENT BACKGROUND AND SCHOOL CHARACTERISTICS

There is a relatively high percentage of private schools (42 percent) in the Southeast compared to other regions. Fathers are the main decision-makers for children's education (56 percent). Students
in government primary schools come from all socioeconomic levels, whereas a large portion of private-school students come from wealthier households. This region has no nonreligious private schools.

PARENTAL CONTRIBUTION AND INVOLVEMENT IN MONEY AND TIME

These charts show parents spend about 7,725 Naira annually for each student in primary school, close to the national average of 7,9I8 Naira. Much of this is spent on extra lessons (59 percent). Of parents with one or more children in primary school, 94 percent report having visited the school at least once; 92 percent

Distribution of Money Spent by Parents on Schooling

have attended a PTA meeting, 76 percent have met with teachers, and 72 percent have attended school meetings in the past 12 months. Overall, parents' involvement in children's education is higher than the national average.

## Time

Percentage of parents taking time for various school-related activities

Source: DHS EdData Survey 2004

## CHILD WELFARE

Seventy-two percent of children live with both parents, but the portion not living with either parent (14 percent) is far higher than the national average. Only 13 percent of children are stunted and I I percent are underweight, compared with the national averages
of 29 percent and 19 percent. Illiteracy among female parents and guardians, at 27 percent, is well below the national average of 46 percent, and their secondary school attainment rate-50 percent-is much higher than the national average of 32 percent.

## PERCEIVED SCHOOL QUALITY

Only seventeen percent of parents or guardians expressed concerns about overcrowded classrooms, and only nine percent were
concerned about the quality of school buildings. Even fewer considered school performance or pupil safety a problem.

Reasons Primary Schools Shouldn't Provide
Reproductive Education

## VALUE OF SCHOOLING

Parents and guardians see acquiring literacy as one of the main benefits of primary schooling. Finding better jobs and learning languages
were rated higher in this region than nationally, while gaining morals/ values, social skills, and good hygiene ranked lower.

## Southeast Nigeria

This education profile is intended to give a basic overview of the education sector in Southeast Nigeria. The data are from the 2004 Nigeria Demographic and Health Survey (DHS) EdData Survey, and are linked to the 2003 Nigeria DHS. The profile highlights issues related to attendance, retention, learning, and teaching efficiency. It also provides information on parents' contributions to their children's schooling (in money and time) and their perceptions of schooling. One section focuses on overall welfare of children in the region.

Note: The survey question on nonattendance was asked of about 1,665 youth ages $6-16$ who had not attended school for any reasons other than physical or mental disabilities. The survey question on dropout was asked of about 306 children ages 4-16 who had dropped out for any reasons other than physical or mental disabilities or long-term illness.

## DATA INSIGHTS

The Southeast is made up of the states of Abia, Anambra, Ebonyi, Enugu, and Imo. The Southeast region outperforms the national average in many of the education indicators.

- Improvements are needed in the following areas:
- Literacy: about 30 percent of 12-yearolds could not read a simple sentence.
- Reaching disadvantaged groups: children in the poorest quintile are the least likely to be attending school.
- On-time attendance: many children start school later than the official age of 6 .
- In the Southeast, parents and teachers are the main providers of reproductive education, at rates much higher than nationally; use of radio and health centers for this is fairly low. Many parents see their children as too young for reproductive education in primary school.
